

Lake Roberta Dredging

FY2019, District 5

Estimated cost: \$400k

Project Description:

To enhance water quality and to improve the general environmental health of Lake Roberta, the City plans to remove the accumulated lake sediments. Currently, the deepest part of the lake is about 6' deep. The dredging project is targeting a new depth of 10'. It is anticipated that approximately 10,000 cubic yards of wet sediment consisting of silt, sand, muck and decomposed vegetation will be dredged from the lake in this project. The increased storage capacity, called the permanent pool volume, will restore the health of the lake and its ability to provide water quality treatment for the stormwater runoff entering the lake from the surrounding area.
