

## Hampton Terrace Neighborhood Resurfacing and Traffic Calming

Neighborhood Resurfacing and Traffic Calming Project | City Project No: 1001539

### Project Description

The Hampton Terrace neighborhood resurfacing and traffic calming project is bounded by N Nebraska Avenue and 15th Street from east to west, and between E Henry Avenue and E Hanna Avenue from south to north. The project scope includes, but is not limited to, the following items:

- Rehabilitating the existing roadway conditions.
- ADA curb ramp and drainage improvements.
- Implementing traffic calming measures to address the traffic safety issues.
- Public engagement for traffic calming suggestions.

The City held a public workshop on July 26 at 6PM located at Ragan Park, where the City presented the scope of the project and expectations during construction. Additionally, the workshop included an opportunity for residents of the neighborhood to make traffic calming suggestions. Furthermore, additional input was collected using the Wikimapping tool. The tool enables residents to make additional suggestions on a geo-spatial application and address their concerns. All inputs and suggestions are taken into consideration. The following shows the list of available traffic calming options:
