## ***INTRODUCTION***

---

The City of Tampa (City) is conducting a Concept Update Study for a proposed East-West Road, which could operate with express lanes between Commerce Park Boulevard/New Tampa Boulevard and the Starter Projects (Starter Projects) that support the ultimate Tampa Bay Express (TBX) Master Plan on Interstate 275 (I-275), as shown in **Figure 1-1**. The purpose of this *Technical Memorandum* is to document the findings of the feasibility assessment, including future traffic conditions within the study area.

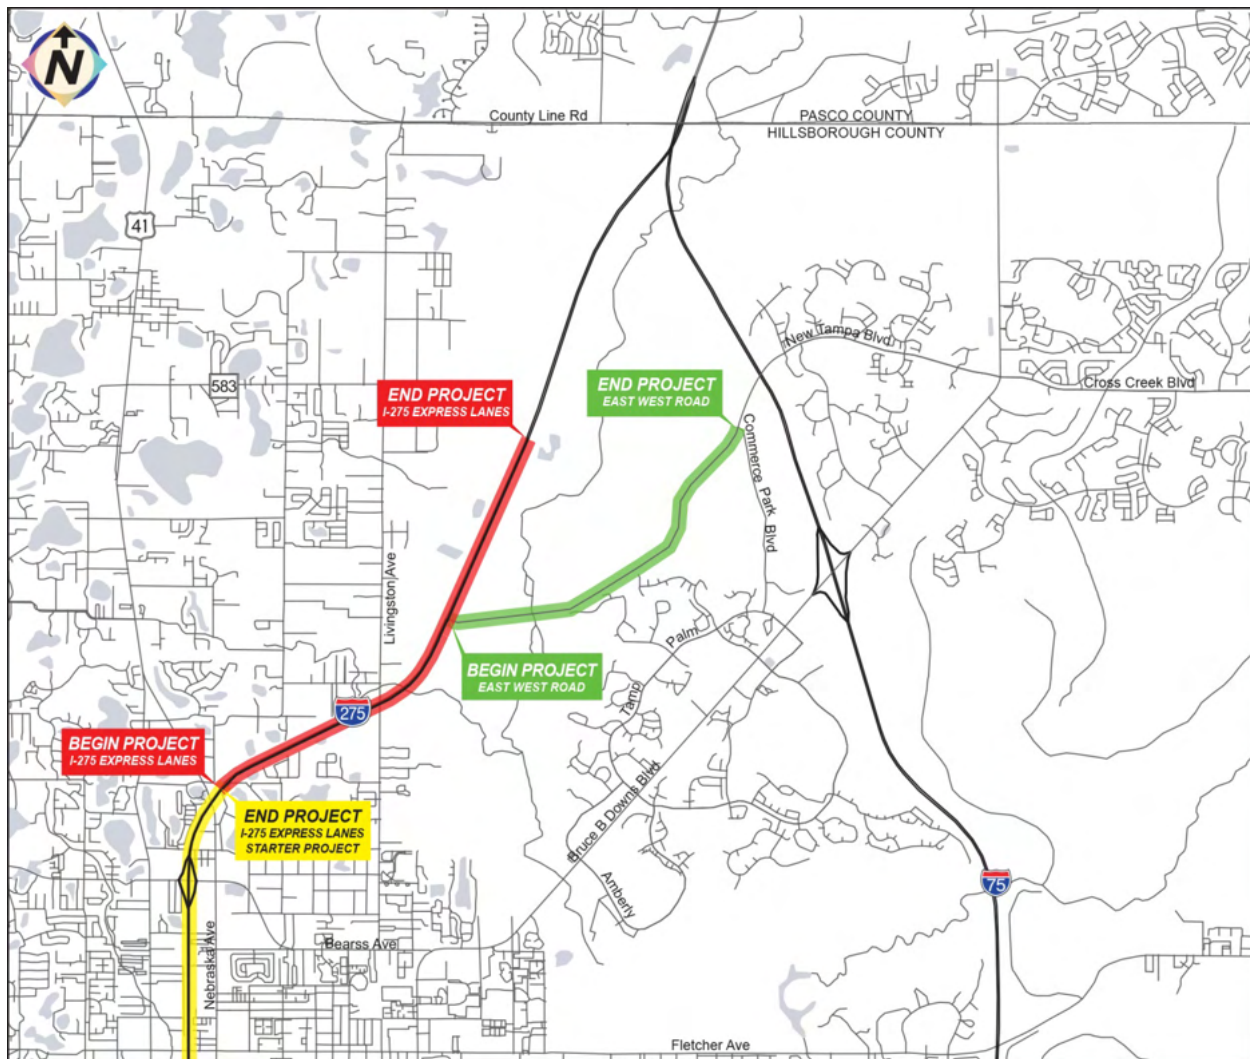

### ***1.1 PROJECT LOCATION AND LIMITS***

The East-West Road corridor is proposed to be a four-lane limited access toll facility (two-lanes in each direction) on new alignment in the New Tampa area of northeastern Hillsborough County, Florida. The project includes a proposed connection to a potential I-275 Starter Project between the I-275/Bearss Avenue interchange and the Interstate 75 (I-75)/I-275 junction. Just east of I-275, East-West Road is proposed to transition from four to two lanes (one in each direction) where it continues on the I-275 express lanes ramps to/from the south.

As illustrated on **Figure 1-1**, the project limits of the proposed East-West Road corridor span from the proposed connection to the I-275 Starter Projects to Commerce Park Boulevard/New Tampa Boulevard. In addition, the project includes an extension of the express lanes on I-275 from the northern terminus of the Starter Project to north of the proposed East-West Road connection with I-275.

**FIGURE 1-1  
PROJECT LOCATION**

## ***Section 2.0***

# ***PROJECT TRAFFIC FORECASTS***

---

This section describes the travel demand modeling procedure as well as the development of future year Annual Average Daily Traffic (AADT) volumes and Directional Design Hourly Volumes (DDHV) for the East-West Road corridor.

### ***2.1 ANALYSIS YEAR***

A Design Year of 2040 was assumed for the project traffic forecasts and analysis.

### ***2.2 TRAVEL DEMAND MODELING***

The 2035 Tampa Bay Regional Planning Model for Managed Lanes (TBRPM-ML) endorsed by the Florida Department of Transportation (FDOT) District Seven Systems Planning Office was used in development of traffic projections for this study. The TBRPM-ML is based on the Florida Standard Urban Transportation Modeling Structure (FSUTMS) and is recognized by the Tampa Bay Area Metropolitan Planning Organizations (MPOs) as an accepted travel demand forecasting tool. The ultimate roadway network used reflects the latest available adopted Cost Affordable Long Range Transportation Plans (LRTPs) for all counties in the region, as well as the I-275 Starter Projects. The model was reviewed to ensure that it accurately reflects the timing of improvements to the surrounding roadway network. In addition, the socioeconomic (SE) data was reviewed to ensure that the latest approved development totals, including those specifically located within the New Tampa area, are represented.

For the a.m. and p.m. peak periods, as well as the off-peak periods, the “variable time of day” tolls from the TBX Master Plan were used. Multiple alternatives were initially modeled for the proposed East-West Road and connection with I-275 to preliminarily evaluate the traffic demand generated in 2035. A brief description of each alternative is as follows:

#### ***ALTERNATIVE 1***

East-West Road and interchange with express lane (toll) ramps to/from I-275 south. New express lanes join the I-275 Starter Project north of Bearss Avenue. This alternative generates 18,100 vehicles per day (vpd) in 2035 on the East-West Road corridor.

#### ***ALTERNATIVE 2***

Addition of express lane (toll) ramps to/from I-275 north to the Alternative 1 model. This alternative generates 300 vpd more than Alternative 1 in 2035 on the East-West Road corridor for total of 18,400 vpd.

### ***ALTERNATIVE 3***

Addition of express lanes (toll) on I-275 through the East-West Road interchange to south of the I-75/I-275 junction to the Alternative 1 model. This alternative generates 12,600 vpd in 2035 on the new I-275 toll facility north of the East-West Road interchange. The total I-275 toll facility traffic north of Bearss Avenue is 31,700 vpd in 2035.

### ***ALTERNATIVE 4***

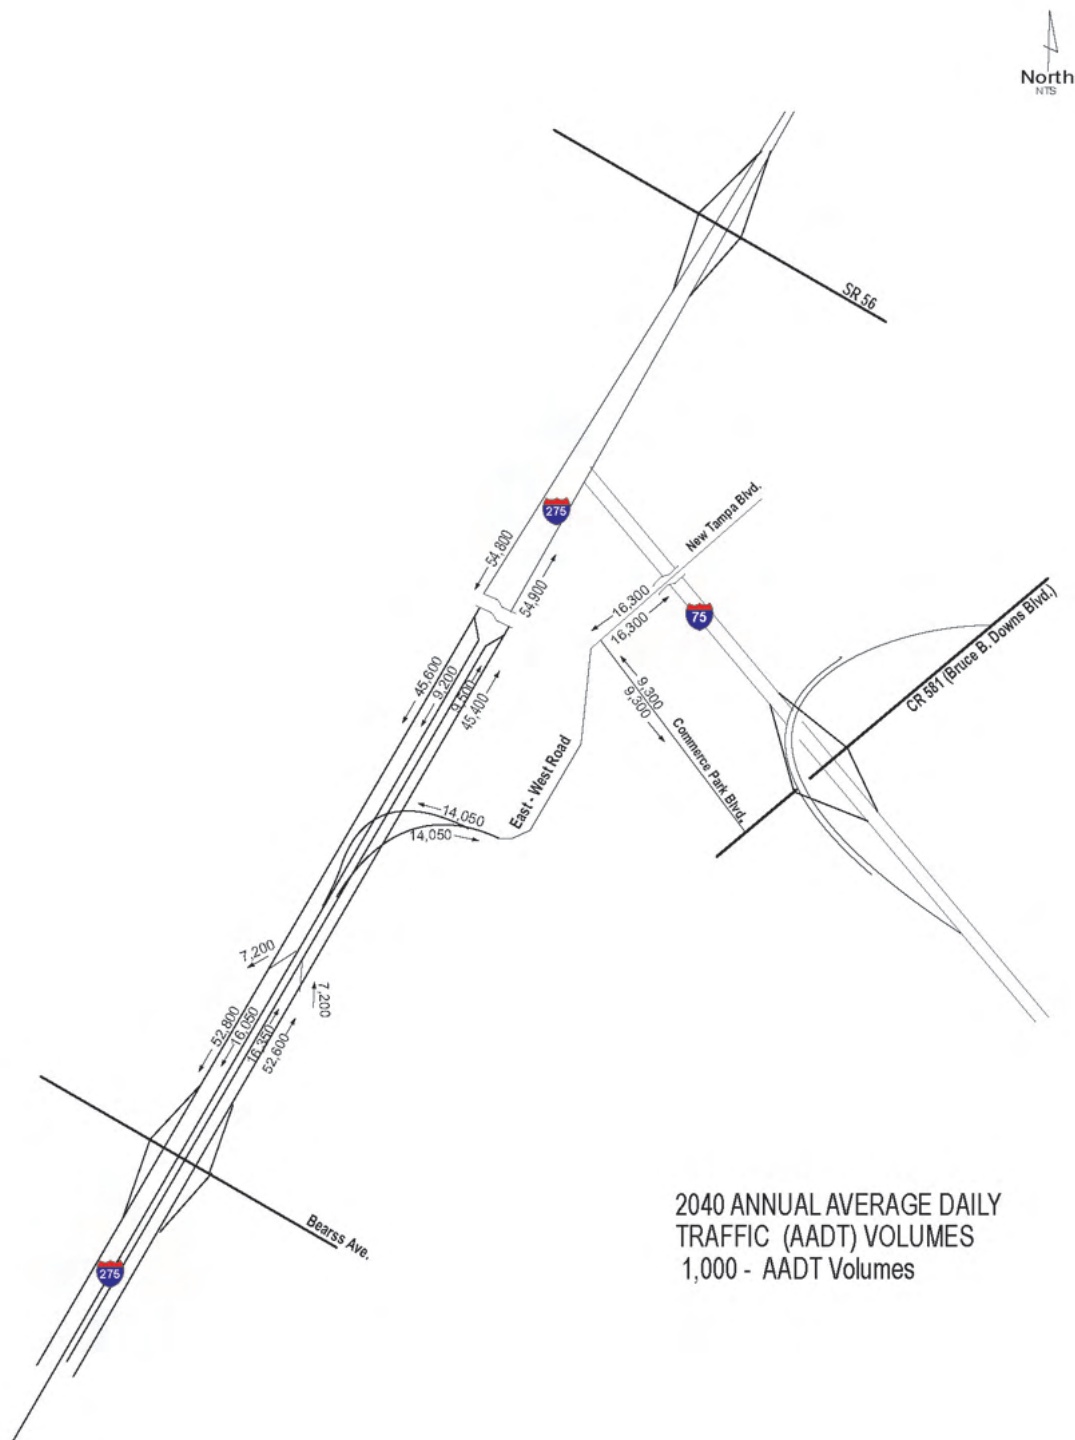

Addition of express lane (toll) ramps to/from I-275 general use lanes at a location north of Bearss Avenue. This alternative generates 8,500 vpd in 2035 on I-275 with total I-275 toll facility traffic north of Bearss Avenue at 34,800 vpd in 2035. East West Road generates 23,400 vpd and 11,400 vpd on I-275 toll facility north of East West Road.

The traffic projections and conceptual roadway plans for all alternatives were presented to the City of Tampa. Based on the total volume of potential toll traffic projected on the East-West Road facilities in 2035, Alternative 4 was approved by the City Project Manager as the preferred alternative for further analysis.

## ***2.3 FUTURE YEAR TRAFFIC VOLUMES***

The Peak Season Weekday Average Daily Traffic (PSWADT) volumes obtained from the 2035 TBRPM-ML model were converted to the respective AADT volumes through multiplication by a factor of 0.95, which is the Model Output Conversion Factor (MOCF) used in the TBX Master Plan. The DDHVs were also obtained from the TBRPM-ML, which is a “time of day” model and provides forecasts for the a.m. and p.m. peak periods. The travel demand model output and the annual growth calculations are documented in **Appendix A**. The AADT volumes and DDHVs for the Design Year (2040) are provided on **Figure 2-1** and **Figure 2-2**.

**FIGURE 2-1**

**FIGURE 2-2**  
**DESIGN YEAR (2040) DIRECTIONAL DESIGN HOURLY VOLUMES (DDHVS)**

## *Section 3.0*

# ***FUTURE CONDITIONS TRAFFIC OPERATIONS ANALYSIS***

---

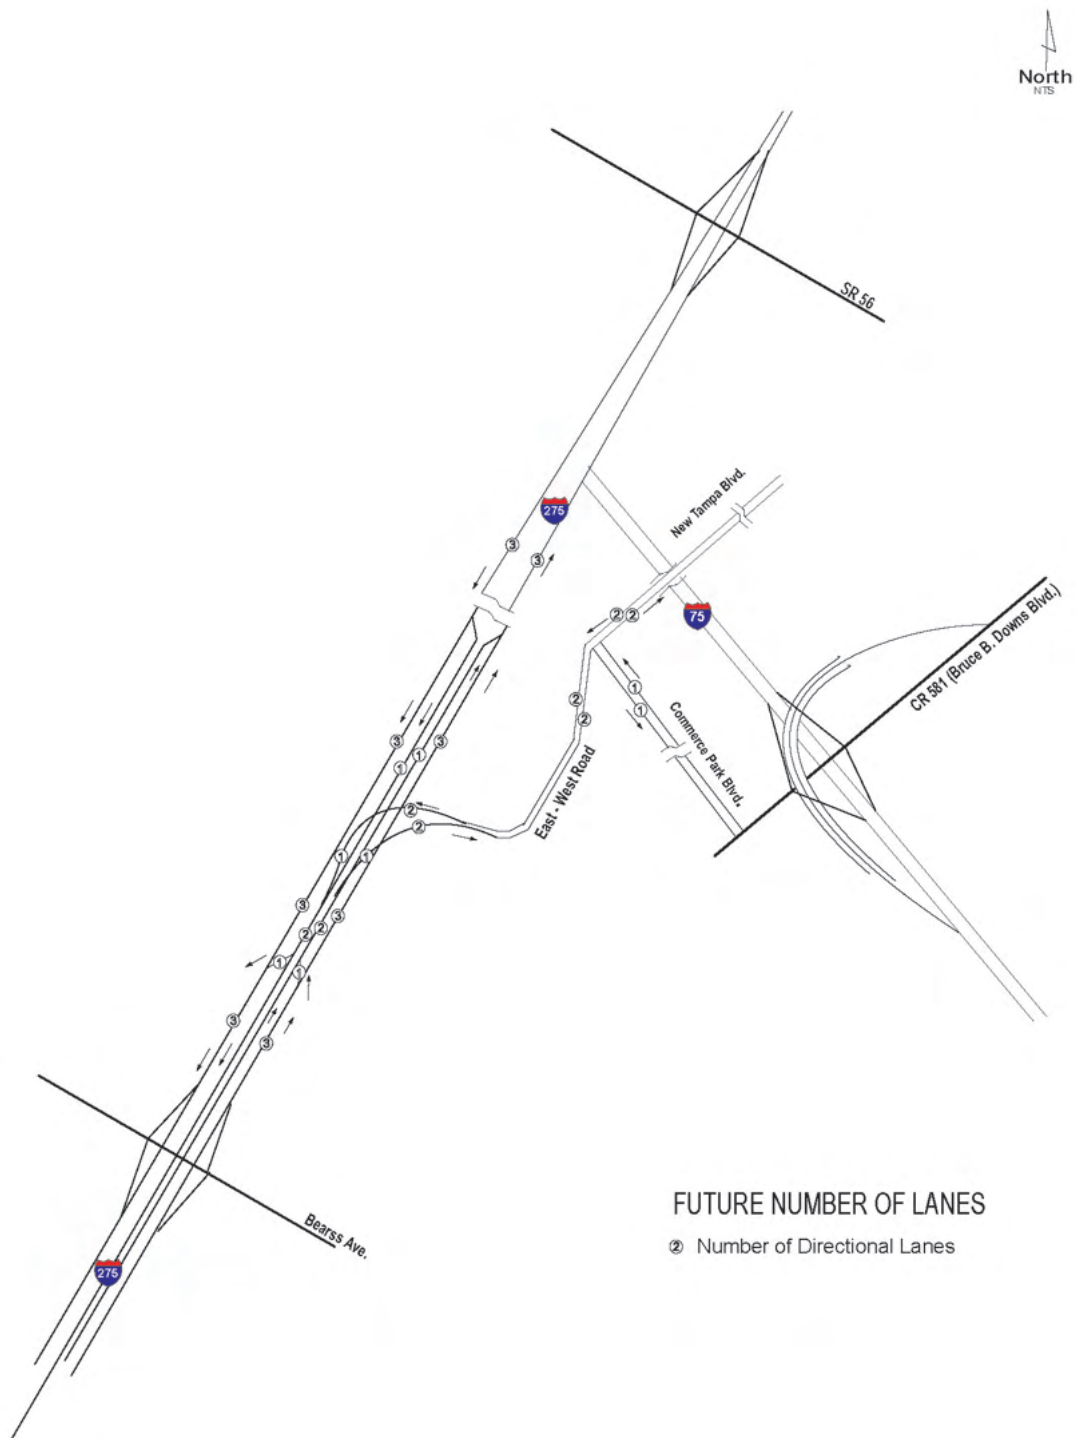

A future conditions traffic operations analysis was conducted to evaluate the performance of the roadways within the study area. The future conditions analysis was performed using the Highway Capacity Software (HCS) 2010, Version 6.5.

### ***3.1 FUTURE BUILD OPERATIONS ANALYSIS***

The number of lanes used in the future analysis of the East-West Road from Commerce Park Boulevard/New Tampa Boulevard and I-275 from Bearss Avenue to the I-75/I-275 junction are provided on **Figure 3-1**. This geometry and the DDHVs provided on Figure 2-2 for the a.m. and p.m. peak period were input into the HCS and the level of service was determined. The levels of service for highways, established by the Transportation Research Board's Levels of Service criteria, range from LOS A through LOS F, where LOS A is the best level of service and LOS F is the worst traffic conditions. The projected levels of service and the associated density in the Design Year (2040) for the East-West Road and the I-275 general use and express lanes are summarized in **Table 3-1**.

In the Design Year (2040), the East-West Road is anticipated to operate at LOS B or better in the a.m. and p.m. peak periods. The proposed express lanes on I-275 are anticipated to operate at LOS D or better with the addition of the East-West Road and interchange. North of the proposed express lane terminus, the general use lanes on I-275 are anticipated to operate at LOS E in the northbound direction during the p.m. peak hour. The Design Year (2040) HCS analyses results are provided in **Appendix B**.

<sup>1</sup> Density = passenger cars per mile per lane

## *Section 4.0*

# *CONCEPTUAL ROADWAY PLAN*

---

Preliminary engineering criteria used to develop the project are consistent with the requirements of the *Plans Preparation Manual*, FDOT (January 2014) and *A Policy on Geometric Design of Highways and Streets*, AASHTO (2004). In addition, the criteria applied for the I-275 express lanes, and separation of those lanes from the I-275 general use lanes, are consistent with current practices included in the *Draft TBX Master Plan* (January 2015).

**Figure 4-1** provides the conceptual roadway plan for the East-West Road preferred alternative. Detailed plan sheets are provided in **Appendix C**.

FIGURE 4-1

## *Section 5.0*

# *PRELIMINARY COST ESTIMATES*

---

Preliminary estimates were developed for the construction costs associated with the preferred Alternative 4 for the East-West Road, interchange at I-275 and additional express lanes on I-275. These costs include Preliminary Engineering (PE)/Design; Mitigation; Permitting; Change Order Contingency; and Construction, Engineering, and Inspection (CEI). A summary of the conceptual cost estimates is provided in **Table 5-1**. For a detailed breakdown of the cost estimate, refer to **Appendix D**. All East-West Road and associated improvements are in current dollars without escalation to the construction year.

**TABLE 5-1**  
**PRELIMINARY COST ESTIMATES**

Roadway	Construction Cost Summary						Total Construction Cost
	Construction	PE/Design	CEI	Mitigation	Permitting	Change Order Contingency	
East-West Road & Interchange Ramps	\$87,222,000	\$10,466,640	\$1,569,996	\$3,132,570	\$62,651	\$4,517,729	\$106,971,586
I-275 Express Lanes	\$41,396,000	\$4,967,520	\$6,209,400	\$0 <sup>1</sup>	\$827,920	\$2,069,800	\$55,470,640
<b>PROJECT TOTAL COST:</b>							<b>\$162,442,226</b>

<sup>1</sup> All mitigation costs for the project are included in the estimate for the East-West Roadway & Interchange Ramps

## **Section 6.0**

# **CONSISTENCY WITH FHWA & FDOT STANDARDS & POLICIES**

---

The Federal Highway Administration (FHWA) regulates the addition and modification of access points along the interstate system and, as such, has eight requirements that must be met before a new connection is approved. The following summarizes how the proposed interchange of East-West Road and the Interstate 275 (I-275) Express Lanes will satisfy each requirement.

- 1     *The need being addressed by the request cannot be adequately satisfied by existing interchanges to the Interstate, and/or local roads and streets in the corridor can neither provide the desired access, nor can they be reasonably improved (such as access control along surface streets, improving traffic control, modifying ramp terminals and intersections, adding turn bays or lengthening storage) to satisfactorily accommodate the design-year traffic demands (23 CFR 625.2(a)).*

The need for a network of managed/express lanes in the Tampa Bay region has previously been established by FDOT. A traffic analysis of existing conditions conducted as part of the TBX Master Plan established that the existing system (general use lanes on I-275 and the connecting roadway network) operate at or over capacity, even with improvements proposed in Hillsborough and Pasco Counties' LRTP. Further, there is no direct connection to I-275 from the New Tampa area and southern Pasco County.

As such, it has been determined through development of the TBX Master Plan and Hillsborough and Pasco Counties' LRTPs that all reasonable improvements have been explored and will not satisfactorily accommodate the design-year traffic demands served by the proposed East-West Road and interchange.

- 2     *The need being addressed by the request cannot be adequately satisfied by reasonable transportation system management (such as ramp metering, mass transit, and HOV facilities), geometric design, and alternative improvements to the Interstate without the proposed change(s) in access (23 CFR 625.2(a)).*

Non-traditional transportation modes such as ramp metering, Travel Demand Management, and Mass Transit were considered as part of Hillsborough and Pasco Counties' LRTP processes and determined to be not sufficient to meet the travel demands that will be addressed by the proposed East-West Road and interchange.

- 3     *An operational and safety analysis has concluded that the proposed change in access does not have a significant adverse impact on the safety and operation of the Interstate facility (which includes mainline lanes, existing, new, or modified ramps, ramp*

*intersections with crossroad) or on the local street network based on both the current and the planned future traffic projections. The analysis shall, particularly in urbanized areas, include at least the first adjacent existing or proposed interchange on either side of the proposed change in access (23 CFR 625.2(a), 655.603(d) and 771.111(f)). The crossroads and the local street network, to at least the first major intersection on either side of the proposed change in access, shall be included in this analysis to the extent necessary to fully evaluate the safety and operational impacts that the proposed change in access and other transportation improvements may have on the local street network (23 CFR 625.2(a) and 655.603(d)). Requests for a proposed change in access must include a description and assessment of the impacts and ability of the proposed changes to safely and efficiently collect, distribute and accommodate traffic on the Interstate facility, ramps, intersection of ramps with crossroad, and local street network (23 CFR 625.2(a) and 655.603(d)). Each request must also include a conceptual plan of the type and location of the signs proposed to support each design alternative (23 U.S.C. 109(d) and 23 CFR 655.603(d)).*

As the access requested for the East-West Road is directly to the express lanes of I-275, the project is not anticipated to degrade the levels of service on the general use lanes of the interstate system. The proposed interchange of East-West Road and the I-275 express lanes is expected to relieve congestion and improve traffic operations at several critical locations in the study area, including the I-75/State Road 56 (SR 56) interchange, the CR 581 (Bruce B. Downs Boulevard)/I-75 interchange, and the section of I-75 south of SR 56. Motorists now accessing I-75 at CR 581 (Bruce B. Downs Boulevard) will be provided convenient access to I-275, which has lower traffic volumes and more available capacity than the parallel portion of I-75. Furthermore, the proposed interchange will enhance incident management capabilities by providing additional detour route options and enhance emergency management capabilities by increasing roadway capacity from the Strategic Intermodal System (SIS) and hurricane evaluation routes to the emergency evacuation centers located in the New Tampa area and southern Pasco County.

- 4 *The proposed access connects to a public road only and will provide for all traffic movements. Less than "full interchanges" may be considered on a case-by-case basis for applications requiring special access for managed lanes (e.g., transit, HOVs, HOT lanes) or park and ride lots. The proposed access will be designed to meet or exceed current standards (23 CFR 625.2(a), 625.4(a)(2), and 655.603(d)).*

The Build Alternative interchange configuration is proposed to access an extension of the I-275 express lanes via Commerce Park Boulevard/New Tampa Boulevard, which are County roadways. Traffic movements are proposed to/from the express lanes on I-275 south. Note that at this time, there are no plans to extend East-West Road west of I-275.

AASHTO recommends a minimum interchange spacing of 3.0 miles in rural areas and 1.0 mile in urban areas. Further, FDOT recommends a minimum spacing of 2.0 miles for urbanized areas and 3.0 miles for transitioning urbanized areas. The location of the

proposed I-275/East-West Road interchange is approximately 3.0 miles north of the I-275/Bearss Avenue interchange and approximately 5.9 miles south of the I-75/SR 56 interchange. As such, the proposed interchange spacing between adjacent interchanges exceeds design guidelines established by the FHWA and the FDOT.

- 5 *The proposal considers and is consistent with local and regional land use and transportation plans. Prior to receiving final approval, all requests for new or revised access must be included in an adopted Metropolitan Transportation Plan, in the adopted Statewide or Metropolitan Transportation Improvement Program (STIP or TIP), and the Congestion Management Process within transportation management areas, as appropriate, and as specified in 23 CFR part 450, and the transportation conformity requirements of 40 CFR parts 51 and 93.*

The need for improved access to/from the New Tampa area and southern Pasco County has long been recognized by the Hillsborough and Pasco County MPO and the City of Tampa. The East-West Road is identified as an unfunded need in the Hillsborough County adopted 2035 LRTP and a potential cost feasible project (depending on the adopted investment scenario) in the 2040 LRTP currently being developed. The East-West Road is also proposed to be included on the latest *Future Transportation Network Map* as part of the Hillsborough County Comprehensive Plan Update.

- 6 *In corridors where the potential exists for future multiple interchange additions, a comprehensive corridor or network study must accompany all requests for new or revised access with recommendations that address all of the proposed and desired access changes within the context of a longer-range system or network plan (23 U.S.C. 109(d), 23 CFR 625.2(a), 655.603(d), and 771.111).*

The East-West Road and proposed connection to the I-275 express lanes will be incorporated into the TBX Master Plan at the appropriate stage of the project development process.

- 7 *When a new or revised access point is due to a new, expanded, or substantial change in current or planned future development or land use, requests must demonstrate appropriate coordination has occurred between the development and any proposed transportation system improvements (23 CFR 625.2(a) and 655.603(d)). The request must describe the commitments agreed upon to assure adequate collection and dispersion of the traffic resulting from the development with the adjoining local street network and Interstate access point (23 CFR 625.2(a) and 655.603(d)).*

Approved and planned developments in the area have been integrated into the travel demand forecasting for this study. Several planned developments have integrated the proposed roadway into their site plans. In addition, Developments of Regional Impact (DRI) have been approved based upon the assumption that capacity provided by the proposed East-West Road will be available in the near future to mitigate traffic impacts

resulting from those developments. The East-West Road is also proposed to be included on the latest *Future Transportation Network Map* as part of the Hillsborough County Comprehensive Plan Update.

- 8 *The proposal can be expected to be included as an alternative in the required environmental evaluation, review and processing. The proposal should include supporting information and current status of the environmental processing (23 CFR 771.111).*

A Project Development and Environment (PD&E) Study for the East-West Road and interchange with the I-275 Express Lanes will need to be prepared concurrent with an Interchange Justification Report (IJR). Any environmental impacts for the proposed roadway and interchange will need to be fully evaluated and documented during the PD&E Study following all procedures and requirements of the National Environmental Policy Act (NEPA).

## *Section 7.0*

# *FEASIBILITY REVIEW*

---

After review of the four potential alternatives, Alternative 4 was approved by the City Project Manager as the preferred alternative for further analysis in this study based on the total volume of potential toll traffic projected on the East-West Road associated facilities. As stated previously in this report, this scenario is projected to generate approximately 28,100 to 32,600 vpd on the East-West Road toll facility and associated I-275 Express Lanes, which warrants the need for a four-lane roadway (two lanes in each direction) on the majority of the East West Road and I-275 corridor. Based on the projected travel demand and number of lanes, the East-West Road is recommended for further evaluation as a potential Public Private Partnership (P3) project. **Figure 7-1** shows the three components of the potential new toll facilities in north Tampa.

As this study focused on the project's feasibility from a traffic demand perspective, an evaluation of potential toll revenues generated by the project will need to be documented in a Preliminary Toll Revenue Study. In addition, an FDOT PD&E/NEPA Study for the East-West Road and interchange with the I-275 express lanes will need to be prepared concurrent with an Interchange Justification Report (IJR). Note that Alternative 4 proposes a new connection to the interstate system and, therefore, constitutes a federal action through the IJR and NEPA process. As such, any environmental impacts for the proposed roadway and interchange will need to be fully evaluated and documented following all procedures and requirements of the NEPA process. The anticipated level of environmental documentation will be an Environmental Assessment (EA) and Finding of No Significant Impact (FONSI).

### **FACTS**

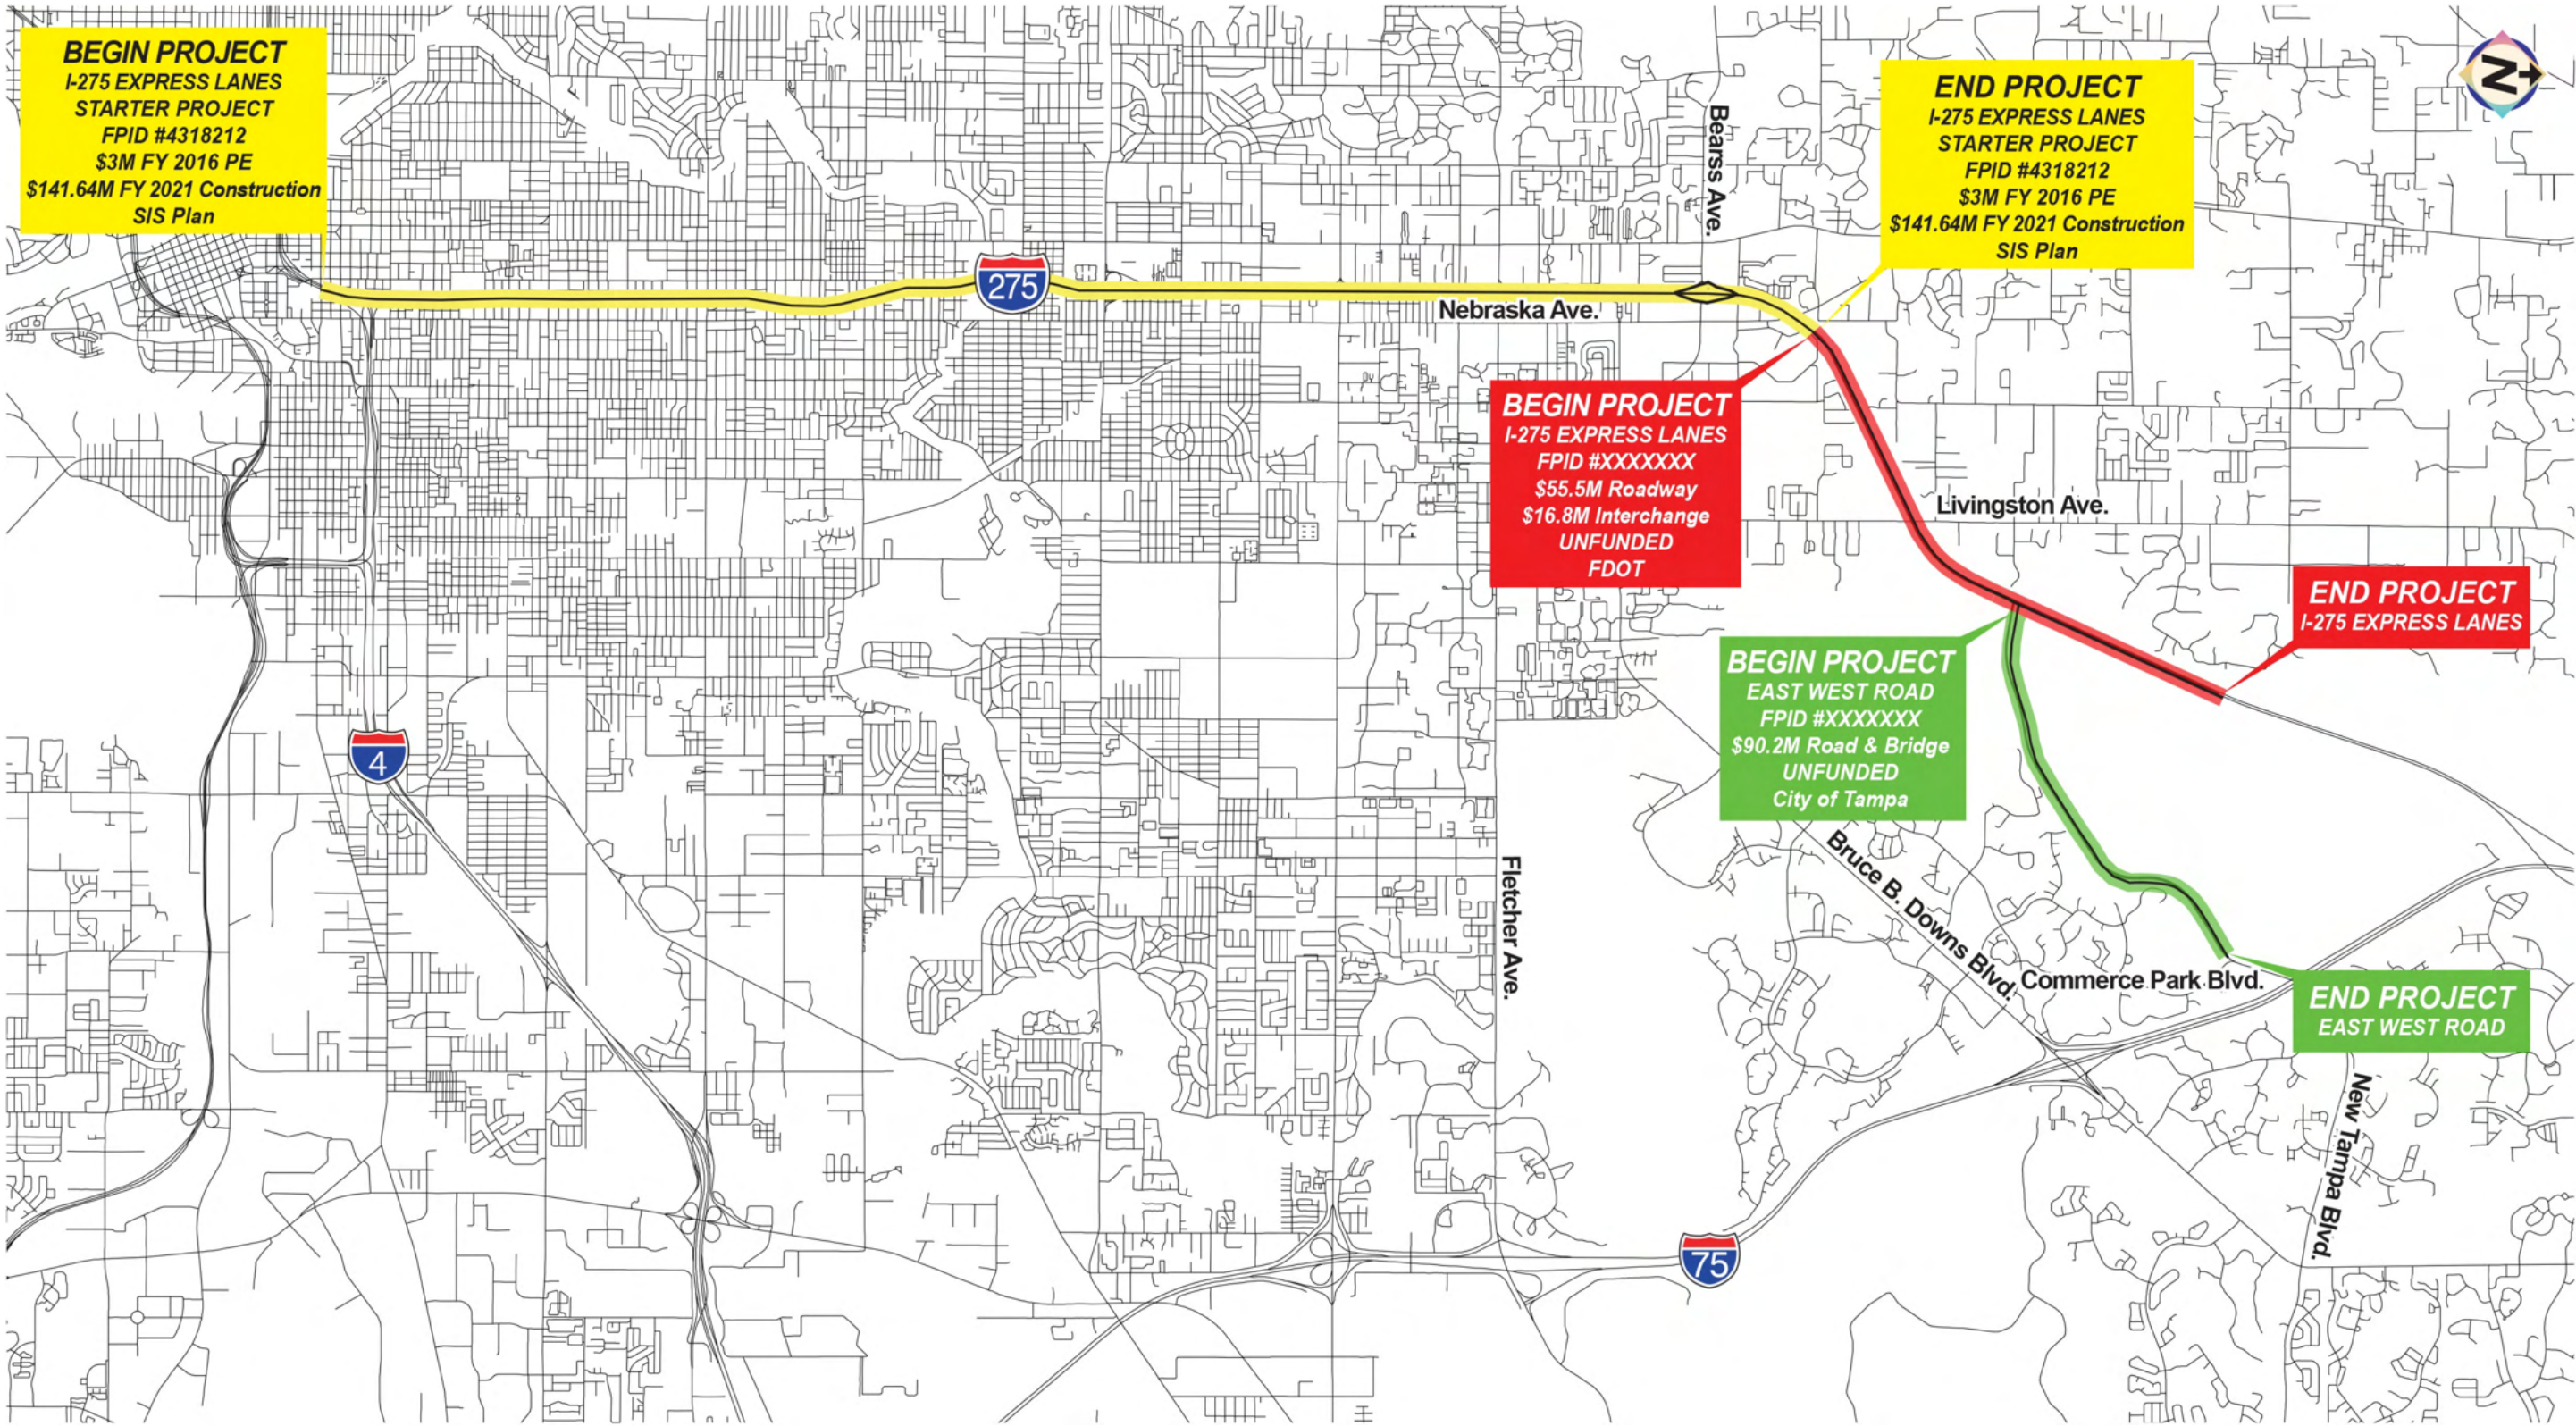

- East West Road in Hillsborough Long Range Transportation Plan (Needs)
  - LRTP 2012-2025 Design \$6.75M
  - LRTP 2031-2040 Construction \$74.89M
  - Revenue Source: Local Sales Tax (if 2016 referendum approved)
- Tampa Bay Express (TBX) I-275 from Jefferson-Orange to North of Bearss Avenue Starter Project in FDOT SIS Plan #4318212
  - FY 2016 PE \$3M / FY 2021 Construction \$141.64M

### **POSSIBLE ADVANCE AS P3**

- TBX I-275 North FPID #4318212 –Jefferson/Orange Access East Side CBD (Funded)

FIGURE 7-1  
POTENTIAL TOLLING FACILITIES IN NORTH TAMPA

- TBX I-275 Extension north of Bearss Ave to East West Road Interchange (Unfunded)
- East West Road Commerce Park Blvd to I-275 TBX (Unfunded)

### **FLORIDA DOT UNSOLICITED PROPOSAL - FLORIDA STATUTE 334.30**

Public-private transportation facilities may advance projects programmed in the

- Adopted Five Year Work Program (FY2015-FY2020 or FY2016-FY2021) or
- Projects increasing transportation capacity and greater than \$500 million in the
- 10-year Strategic Intermodal Plan using funds provided by P3s or
- Private entities to be reimbursed from department funds for the project as programmed in the adopted work program.
- Florida DOT Unsolicited Proposal Process:
  - Proposers should begin conceptual discussions with the Project Finance Manager, (Leon Corbett) in the Office of the Comptroller, Project Finance Section to gain an understanding of program basics.
  - If proposal meets basic program requirements, proposers should continue conceptual discussions with the District/Turnpike to determine District/Turnpike interest.
  - If District/Turnpike is interested, the concept should receive executive direction (Secretary/Assistant Secretary/District Secretary) before proceeding further.
  - Central Office will determine if the project involves federal aid and/or is state-funded. District/Turnpike should request a Cash Availability Schedule from Central Office.
  - Proposer submits to the Project Finance Manager an Unsolicited Proposal with \$50,000 deposit. Proposal may be a brief concept statement. If acceptable and within Executive Direction, the Department begins 120-day advertisement period.
  - During the advertisement period no evaluation or analysis is performed on the proposal(s).
  - All proposals must be complete and sufficient for evaluation by the end of the advertisement period or will be rejected and returned.
  - At the end of the advertisement period, District/Turnpike and Central Office will evaluate the proposal(s) as may be appropriate and select Best Value Proposal for negotiation.

- If executive direction is to proceed, then award/execute contract with the final selected proposer.
- Project is produced by the District/Turnpike according to the negotiated procurement documents
- East West Road Commerce Park Blvd to I-275 TBX (Unfunded)
  - City/County 1% Sales Tax Initiative 2016 Referendum required (\$83.16M)
  - Seek Federal Transit Administration “Premium Transit” funding for “guideway”
  - Potential Tolls on City of Tampa East West Road dedicated to funding – 2040 AADT 28,100

## ***WHAT’S NEXT?***

City requests FDOT, Hillsborough County, Tampa Hillsborough Expressway Authority, and MPO to cooperate on funding the East West Road and TBX I-275 north extension to tie East West Road to TBX I-275. Potential funding scenarios to advance the project are:

- Seek FDOT \$55.5M SIS funds for new TBX extension from current programmed TBX project #4318212 (does not include \$16.8M for East West Road/I-275 interchange)
- Seek FDOT to provide I-275 Interchange (\$16.8M) at East West Road as part of TBX extension north from current TBX project #4318212
- City and/or County funding \$23.81M “gap” in 2021-2025 (\$106.97M – \$83.16 = \$23.81) assumes 2016 Hillsborough 1% Sales Tax already committed for \$83.16M without I-275 interchange
- FDOT/Florida Turnpike Alternative and THEA/P3 Alternative assumes transfer ownership of East West Road from City and becomes part of State Road system
- City of Tampa could reinitiate the LAP agreement with FDOT D7 to fund revised IJR and PD&E using basic information updated from 2009 East West Road shutdown. Possible use of FDOT funding for LAP and subsequent design/build or P3 funding.

Preliminary Cost Estimate  
March 10, 2015

<b>DESCRIPTION</b>		<b>Alternative 4</b>
		<b>Directional Toll Option</b>
<b>EAST-WEST ROAD (Urban 4 Lane Divided)</b>		<b>\$73,537,000</b>
Roadway		\$23,834,831
Bridges		\$49,702,169
<b>RAMPS</b>		<b>\$13,685,000</b>
Roadway		\$9,828,188
Bridges		\$3,856,812
<b>CONSTRUCTION TOTAL</b>		<b>\$87,222,000</b>
Design Fees (12.0%)		\$10,466,640
CE&I Fees (15.0%)		\$1,569,996
Mitigation		\$3,132,570
Permitting (2.0%)		\$62,651
Change Order Contingency (5.0%)		\$4,517,729
<b>4 LANE PROJECT DEVELOPMENT TOTAL</b>		<b>\$106,971,586</b>
<b>EXPRESS LANES (NB &amp; SB) ON I-275</b>		<b>\$41,396,000</b>
Roadway		\$41,396,000
<b>CONSTRUCTION TOTAL</b>		<b>\$41,396,000</b>
Design Fees (12.0%)		\$4,967,520
CE&I Fees (15.0%)		\$6,209,400
Mitigation (All mitigation incl. above)		\$0
Permitting (2.0%)		\$827,920
Change Order Contingency (5.0%)		\$2,069,800
<b>I-275 EXPRESS LANES DEVELOPMENT TOTAL</b>		<b>\$55,470,640</b>
<b>PROJECT TOTAL COST</b>		<b>\$162,442,226</b>

**NOTES:**

1. Costs for all other bridges are based on average span AASHTO girder
2. Costs do not include Right of Way acquisition.
3. Costs do not include legal or administrative costs.
4. Costs include a gantry type open road toll collection facility.
5. All mitigation costs are included in the initial 4 Lane project.
6. All costs are present day cost.
