

# El Prado Green Infrastructure

FY2019, District 4

Estimated cost: \$170k

## **Project Description:**

Project implements green infrastructure technology on two vacant lots near the intersection of El Prado Blvd. and S. Manhattan Ave. The green infrastructure provides aesthetics to the residential area in addition to serving as a functional means for capturing, storing, and treating urban stormwater runoff. The green infrastructure technology incorporates Florida-friendly landscaping that allows runoff to slowly percolate into the ground before discharging to the existing stormwater system.

## **Justification:**

This low lying area experiences street and yard flooding. The proposed project will provide water quality treatment, flooding relief, and aesthetics for the neighborhood.
