Scope of Services through Preliminary Engineering Report

INTRODUCTION

The University Pump Station is one of the larger wastewater pump stations in the City of Tampa's (CITY) system. Located on 131st Street immediately east of Nebraska Avenue, it is the northernmost master pump station on the CITY's Central Interception Sewer System serving North Tampa, USF and New Tampa. The station is a wet pit/dry pit style station constructed in the late 1970's, although modifications have been ongoing through 2022. The original pump design consisted of two-300 hp pumps with space for a third. Currently there are two-350 hp and one 400 hp dry pit style centrifugal pumps in the station. Although the pumps have been upgraded over the years, much of the electrical and support equipment are original.

The purpose of this project is to:

- 1) Upgrade the capacity of the station by determining the buildout flow rates within the pump station service area and provide a recommended pump configuration and operating philosophy.
- 2) Upgrade the existing electrical equipment to meet current CITY and NEC requirements.
- 3) Identify and repair structural deficiencies.
- 4) Evaluate and upgrade or replace support equipment such the mechanical screening system, building ventilation system, emergency generator and odor control system.

The CITY has requested that AECOM (FIRM) perform this effort in two steps. Step 1 will be to perform a station needs assessment evaluation and provide recommendations and costs for the recommended improvements. Step 2 will be preparing construction documents detailing the agreed upon upgrades. In addition, this step will include permitting, bidding phase services and engineering support during the construction phase.

The following details FIRM's proposed scope of services for Step 1 of this project. The project deliverable for this step will be a Preliminary Engineering Report (PER) that details the findings of the station assessment and provides recommendations for improvements along with estimated construction costs. Once the CITY accepts the recommendations, a second scope of work will be prepared for the Step 2 work which will consist of developing construction documents and providing construction support for implementing the recommendations.

The proposed scope of work for the first phase of this project has been organized into 16 interrelated tasks as follows:

- Task 1 – Project Management
- Task 2 – Kick-off Meeting/Data Review
- Task 3 – Current and Projected Flows
- Task 4 – Pump Flow/Pressure Study
- Task 5 – Pump Alternatives
- Task 6 – Electrical System Evaluation
- Task 7 – Structural Evaluation
- Task 8 – Building Ventilation
- Task 9 – Odor Control Alternatives
- Task 10 – Influent Screening Evaluation
- Task 11 – Emergency Generator Alternatives
- Task 12 – Site Modifications
- Task 13 – Sewage Bypass/Phasing Plan
- Task 14 – Summary Report
- Task 15 – Meetings
- Task 16 – Owner's Allowances

A detailed description of these tasks is provided in the following sections.

SCOPE OF SERVICES

Task 1 - Project Management

Objective: FIRM will be the prime consultant and as such will be responsible for the overall management of this contract.

FIRM Activities: As part of managing this first step, the following tasks will be performed for the duration of this phase of the contract, which is estimated to last 10 months.

- 1) Overall project file management
- 2) Monthly invoicing
- 3) Client interface
- 4) Managing sub-consultants
- 5) Scheduling of completion dates for all Tasks identified below.

Task 2 - Kick-off Meeting/ Data Review

Objective: Within 10 days of receipt of the Notice to Proceed, a project Kick-off meeting will be held.

Exhibit A – Scope of Services

City of Tampa
University Pumping Station-Rehabilitation Design
24-D-00023

FIRM Activities: The purpose of the kick-off meeting will be to introduce the project team to the CITY, discuss operational problems that the CITY is currently experiencing and discuss the goals and objectives of the project. In addition, an information request will be prepared and submitted to the CITY. Once the information is received, it will be reviewed by the project team to determine if any additional information will be required.

In conjunction with this meeting, a site visit will be conducted so that the project team can review the condition of the station and discuss operational concerns with CITY staff.

Task 3 - Current and Projected Flows

Objective: One of the goals of this project is to replace the existing pumps with new ones that will effectively operate under existing and projected flow rates.

Firm Activities: To assist in this selection, the current and projected range of flows will need to be determined. Three to five years of flow data will be reviewed and evaluated to understand the current range of flows. From this data, a graphic will be prepared that will illustrate the minimum and maximum flow rates during dry weather and wet weather conditions.

Next, future flow rates will be estimated. Available planning documents from Hillsborough County, plus existing and projected zoning maps, will be used to project population growth within the University Pump Station service area. Based on the results of the evaluation, projected flow rates will be developed.

Using the information developed on current and future flow rate conditions, graphics will be developed illustrating current and future wet season and dry season flow rates and the approximate percentage of time these conditions will occur. This information will be useful when selecting pump configurations and developing pumping philosophy. In addition, it will be important that this information be coordinated with the design-build team upgrading the downstream Sulphur Springs Pump Station to ensure this station has capacity to accept projected peak flows from University Pump Station.

Deliverable: Technical Memorandum detailing current and projected flows rates to University Pump Station

Task 4 - Pump Flow/Pressure Study

Objective: The CITY has indicated that excessive pressures are being observed in the pumping system that are significantly greater than those predicted by hydraulic modelling of the system, which needs to be investigated.

FIRM Activities: To investigate this condition, a study will be performed where field collected pressures and flow data will be compared to hydraulic modeling results. To perform this task, the FIRM will work with the City to collect data consisting of flow and pressures at the pump station and at air release valves along the force main. Currently the station flow meter is not working. The

Exhibit A – Scope of Services

City of Tampa

FIRM will develop methods for collecting flow data. An allowance has been included for rental of flow monitoring equipment if needed. FIRM will then perform hydraulic modeling of the pump station system and compare the results. If significant variation is found between field data and modeling results, friction coefficients used in the model will be adjusted in an effort to replicate field data.

The results of this analysis will be summarized in a technical memorandum. Should the modifications to the hydraulic model be excessive in order to replicate field data, recommendations for further studies to the force main system will be provided. Any work associated with the force main is outside of the scope of services for this project.

Deliverable: Technical Memorandum comparing field data versus hydraulic modeling results

In the event that the CITY cannot provide that required field data, FIRM will arrange for a temporary flow meter and pressure gauge system to be installed at the pump station. The cost for this is described in Task 16 - Owner's Allowance.

Task 5 - Pump Alternatives

Objective: Utilizing current and projected flow information determined in Task 3, four (4) pumping system arrangements will be considered.

FIRM Activities: Based on our review of the existing pump station layout, pump arrangement alternatives will be limited to utilizing the three existing pump intake systems, and possibly supplementing this with submersible "jockey" type pumps installed in the wetwell.

- Option #1 will consider two large pumps (one duty + 1 standby) and a jockey pump utilizing the three existing suction intake systems.
- Option #2 will consider three pumps of equal size (two duty+ one standby) utilizing the three existing suction intake systems.
- Options #3 will be the same as Option #2 except that consideration will be given to installing one or two submersible jockey pumps in the existing wetwell to supplement the three large pumps.
- Option #4 will consider an "N+2" arrangement wherein one pump will be able to meet the full range of flows.

To perform this evaluation, hydraulic modelling of the force main system, using the model developed in Task 4 will be performed. A series of hydraulic simulations will be performed to determine the pump hydraulic conditions for each option. This information will be used to select potential pumps for each option.

Next, CFD modeling of the wetwell and intake system will be performed to determine if there are concerns with the hydraulic actions that will be occurring in the intakes based on the anticipated

Exhibit A – Scope of Services

City of Tampa
University Pumping Station-Rehabilitation Design
24-D-00023

maximum flow rates. The modeling results should indicate possible hydraulic shortcomings (if any) when utilizing the existing intakes for the different options.

The results of this effort will be summarized in a technical memorandum.

Deliverable: Technical Memorandum on evaluation of pump arrangements

Should the CFD modelling indicate potential hydraulic shortcomings in the wetwell/intake layout, physical modelling may be needed to confirm this and to evaluate solution alternatives. The cost to perform this work is \$82,000 as described in Task16- Owners Allowance.

Task 6 - Electrical System Evaluation

Objective: Once pump motor sizes are established, an evaluation of the electrical/ Instrumentation system will be performed to determine what upgrades will be needed.

FIRM Activities: Based on the pump motor sizes and configuration, preliminary sizing of the electrical service, Switchgear, MCC, VFD's and standby generator will be provided. The evaluation will also identify the new equipment to be provided, the existing equipment to be removed and replaced and the equipment that can be reused.

Currently, the MCCs, VFDs and generator are located in the pump building but are not in climate-controlled conditions. Options will be identified for constructing a new climate controlled electrical room within the existing building or constructing a new climate controlled precast concrete building adjacent to the pump building. Preliminary floor plans, based on dimensions of anticipated new equipment, will be provided. Preliminary site plans will be provided for options which include precast electrical buildings adjacent to the pump building. The proposed site plan will address any option where the new standby generator will be located exterior to the pump building. The alternative layouts will be ranked based on functionality and cost. In addition, a proposed one-line diagram will be developed to depict power distribution to the new and reused equipment.

The existing SCADA/control system will also be evaluated. Revisions to the existing SCADA system, based on the CITY's current standards, will be identified. This effort will include an evaluation of the existing liquid level controller and consolidation of the existing remote I/O at the station.

All existing lighting will be evaluated. All lighting fixtures identified as needing to be replaced will be specified as LED.

Deliverables: A layout of the recommended improvements to the electrical equipment room. A detailed line-item cost estimate for improvements/upgrades for all electrical, SCADA and lighting improvements. The results of this effort will be summarized in Technical Memorandum.

Exhibit A – Scope of Services

Task 7 - Structural Evaluation

Objective: Although the building, wetwell and influent channels appear to be in satisfactory condition, a condition assessment will be performed by a professional structural engineer to determine what repairs may be required.

FIRM Activities: The condition assessment will be limited to a visual inspection. If further destructive or non-destructive testing is needed, this will be performed during the design phase. Deficiencies observed during the visual inspection will be noted as part of the condition assessment with approaches that can be used to repair the observed deficiencies provided. This would include recommending protective coatings for concrete surfaces.

Task 8 - Building Ventilation

Objective: Currently, a fan style ventilation system provides for air circulation in the building. Four roof ventilators provide air movement in the main building. A supply fan provides air movement in the pump room. The existing ventilation system will be evaluated to determine if the existing equipment should be replaced/upgraded. Ventilation in the wetwell and influent channels will be evaluated as part of the odor control evaluation in Task 9.

FIRM Activities: The building ventilation system will be evaluated to determine if system meets current code requirements and if existing equipment should be replaced. Recommendations for upgrades and/or modifications to equipment and duct work will be identified.

Task 9 - Odor Control Alternatives

Objective: Currently, odor control is provided by upstream chemical addition in the wastewater collection/transmission system followed by treatment of foul air from the influent channels and wetwell by an on-site scrubber system. The CITY has requested that the options for a new odor control system be evaluated since the existing system is nearing the end of its useful life. The upstream chemical addition system will remain as is.

FIRM Activities: In order to fully understand treatment requirements, a field monitoring program will be performed to assess contaminants that will need to be treated. The program will include continuous pressure and H₂S monitoring over a 3-week period and the collection of grab samples to monitor mercaptans, ammonia and amines in the vapor phase and dissolved sulfide, nitrates and pH in the liquid phase. Using this information, various treatment technologies such as biological, chemical and dry media systems will be considered. A matrix evaluation of the selected systems will be performed comparing removal efficiencies, capital and operating costs, and system layout as it pertains to the project site. Based on the results of this analysis, a recommendation for a new

odor control system will be provided. A technical memorandum summarizing the results of this effort will be prepared and submitted to the CITY for review and comment.

Deliverable: Technical Memorandum summarizing findings and recommendations for a new odor control system

Task 10 - Influent Screening Evaluation

Objective: The current mechanical screening systems, located in the influent channels, do not operate properly and have been removed. The CITY has indicated that the units should be replaced by a screening system manufactured by Duperon and that the drive motors, controls and compacting systems should be located above the wetwell.

FIRM Activities: Determine the most appropriate Duperon screening and compacting system for this application. Evaluate methods to protect the equipment located above the wetwell from weather conditions and from hydrogen sulfide gases that may be generated in the influent channels and wetwell. This effort and a recommended design will be summarized in a Technical Memorandum that will be submitted to the CITY for review and comment.

Deliverables: Technical Memorandum discussing alternatives for coarse screening

Task 11 - Emergency Generator Alternatives

Objective: A new emergency generator will be provided to power the station in the event there is a power loss.

FIRM Activities: The generator will be sized to run all components of the pump station. A 'belly" style fuel tank will be provided sized to accommodate 5 days' worth of fuel. Consideration will be given to installing the generator system within the existing building or on the pump station site with a walk in style enclosure.

Task 12 - Site Modifications

Objective: Once exterior equipment locations have been established, an evaluation of the site will be performed to determine what modifications are needed to accommodate the proposed exterior equipment.

FIRM Activities: This evaluation will result in a revised conceptual site plan. A review of the existing site stormwater permit (if any) and current Hillsborough County site requirements will also be performed to determine if the site work will require permitting and possible upgrades to the onsite drainage, landscaping and site access.

Exhibit A – Scope of Services

City of Tampa

Task 13 - Sewage Bypass/Phasing Plan

Objective: A conceptual sewage bypass/phasing plan will be developed based on the construction that is to be performed. Although it might be possible to perform the work in stages and maintain operation, it is more likely that the station will need to have a sewage bypass plan developed so that the station can be shut down during construction.

FIRM Activities: We will work with CITY staff to develop a plan that is acceptable and will be included in the construction documents.

Task 14 - Summary Report

Objective: Create a Draft and final PER.

FIRM Activities: The work performed in the above tasks will be summarized in a Draft PER which will be submitted to the CITY for review and comment. The report will also include a preliminary construction cost estimate and a proposed design and construction schedule. Once the CITY has had sufficient time to review the draft document, a review meeting will be held to address questions and comments about the report. Once these have been addressed, the report will be finalized and will become the basis for preparing construction documents to implement the recommended improvements.

Deliverables; Draft and Final PER

Task 15 - Meetings

FIRM Activities: The following meetings are included in our proposal.

- Kick-off/Site visit
- 3 meetings to discuss Technical Memorandum submitted to CITY. The CITY shall not be invoiced if the meeting requests exceed 3.
- Review meeting to discuss Draft PER

Task 16 – Owner’s Allowances

Objective: An Owner's Allowance has been included to be used for services not covered in this Scope of Work.

No work shall be performed , no payment shall be made prior to written authorization by the City based on a scope and fee mutually agreed upon by the City and the FIRM.

Notwithstanding anything herein to the contrary, any charge or increase to allowance amounts must be approved by the City in advance and in writing. If not so approved, the charge will be deemed to be at the FIRM's sole cost without reimbursement. The only allowance allowed are those clearly identified in the agreement. Any remaining allowance shall belong 100% to the City.

FIRM Activities: Specific items identified include physical modeling of the pump station wetwell, and providing a temporary flow meter and pressure monitoring system. In addition, an allowance for additional engineering services is also included. It is understood by FIRM that any charges to the allowance amount must be approved by CITY in advance and in writing, and that if approval is not obtained, charges will be deemed to be at the FIRM's sole cost without re-imbursement. The only allowances allowed are those clearly identified in the Agreement (including this and other incorporated exhibits). Any remaining allowance amounts shall belong 100% to the CITY.

Physical Modeling - Although CFD modeling is a good initial tool for evaluating the pump intake systems, it is recommended that physical modelling of the wetwell/intake system also be performed to confirm that the wetwell/intake system can accommodate the proposed peak flow rate or if modifications are needed. This work would be performed by Verdantas (Clemson Engineering Hydraulics). They will create a scaled model of the University Pump Station wetwell/intake system and will perform dye testing under a variety of hydraulic conditions to determine if modifications, such as straightening vanes, are needed to ensure smooth transition of flows from the wetwell intake to the pump volute.

Rental of Flow and Pressure Monitoring equipment – in the event that a flow meter and pressure monitoring system is needed, FIRM will supply a temporary flow meter. A quotation has been requested from AWC Inc. At this time a placeholder cost of \$25,000 is included. This will be updated when the quotation is received.

Additional Engineering Services - A contingency amount of \$75,000 has been included to cover any engineering services beyond those outlined in this Scope of Services.

Firm's maintenance of insurance coverage as required herein is a material element of the Agreement and the failure to maintain or renew coverage or provide evidence of same (defined to include without limitation Firm's affirmative duty to provide from time to time upon City's request certificates of insurance, complete and certified copies of Firm's insurance policies, forms, and endorsements, information on the amount of claims payments or reserves chargeable to the aggregate amount of coverage(s) whether during the term of the Agreement or after as may be requested by the City in response to an issue or potential claim arising out of or related to the Agreement to which Firm's insurance obligations hereunder may apply or possibly help mitigate) may be treated as a material breach of the Agreement. Should at any time Firm not maintain the insurance coverages required, City at its sole option (but without any obligation or waiver of its rights) may (i) terminate the Agreement or (ii) purchase such coverages as City deems necessary to protect itself (charging Firm for same) and at City's option suspending Firm's performance until such coverage is in place. If Firm does not reimburse City for such costs within 10 days after demand, in addition to any other rights, City shall also have the right to offset such costs from amounts due Firm under any agreement with the City. All provisions intended to survive or to be performed subsequent to the expiration or termination of the Agreement shall survive, including without limitation Firm's obligation to maintain or renew coverage, provide evidence of coverage and certified copies of policies, etc. upon City's request and/or in response to a potential claim, litigation, etc.

The City reserves the right from time to time to modify or waive any or all of these insurance requirements (or to reject policies) based on the specific nature of goods/services to be provided, nature of the risk, prior experience, insurer, coverage, financial condition, failure to operate legally, or other special circumstances. If Firm maintains broader coverage and/or higher limits than the minimums shown herein, the City requires and shall be entitled to such broader coverage and/or higher limits maintained by Firm. Any available insurance proceeds in excess of the specified minimum limits of insurance and coverage shall be available to the City. No representation is made that the minimum insurance requirements are sufficient to cover Firm's interests, liabilities, or obligations. Required insurance shall not limit Firm's liability.

Firm acknowledges and agrees Firm and not the City is the party in the best position to determine applicability (e.g. "IF APPLICABLE"), confirm, and/or verify its insurance coverage. Acceptance by the City, or by any of its employees, representatives, agents, etc. of certificates or other documentation of insurance or policies pursuant to the terms of this document and the Agreement evidencing insurance coverages and limits does not constitute approval or agreement that the insurance requirements have been met or that coverages or policies are in compliance. Furthermore, receipt, acceptance, and/or approval of certificates or other documentation of insurance or policies or copies of policies by the City, or by any of its employees, representatives, agents, etc., which indicate less coverage than required does not constitute a waiver of Firm's obligation to fulfill these insurance requirements.
