## **Project Understanding**

Recent Hurricanes Helene and Milton caused wastewater overflows along Coachman Avenue. Wastewater collection system overflows in the vicinity of Coachman Avenue led to a significant study in 2004 which identified the delivery capacity of the Bayshore Pump Station as a major contributing factor to the system overflows. This report recommended that the City increase the conveyance capacity of the Bayshore Pump Station to mitigate surcharging of the interceptor along Coachman Ave. This improvement was completed in 2005. The pump station is currently being rehabilitated to restore station reliability and improve resiliency under a separate project and should reduce the risk of overflows in the Bayshore Basin. However, since the top of the manholes along W. Coachman and W. Alline Avenues, between MacDill Avenue and Bayshore Blvd, are significantly lower than the manholes along Bayshore Boulevard, this area remains a concern for future storm-related wastewater overflows.

The City is seeking professional engineering services to develop and design wastewater system improvements to prevent future storm-related wastewater overflows along W. Coachman and W. Alline Avenues along with data acquisition throughout the Bayshore Basin. We understand this project will include an initial phase to develop and evaluate alternatives, followed by a second phase to design and develop construction documents for the implementation of the recommended improvements. The proposed scope described below is for the initial phase of this project.

## **Scope of Services**

### **1. Task 1 – Initial Alternatives Development**

- 1.1. Using existing data and previous hydraulic studies of this area, Tetra Tech will develop a list of up to six (6) initial alternatives to mitigate future overflow potential along W. Coachman and W. Alline Avenues, between MacDill Avenue and Bayshore Boulevard. The initial set of alternatives to be considered will include, but will not be limited to, creating some small sewer basin with dedicated pump station to disconnect the overflow-prone areas from the surcharging conveyance elements, re-routing pump station flows to relieve stressed gravity lines, sealing low-lying manholes along Coachman Ave., and improving the gravity sewer infrastructure. An allowance to evaluate an additional three (3) alternatives that may emerge during this initial part of the project is included in Task 6 below.
- 1.2. Tetra Tech will present these initial alternatives to the City during an early-phase Workshop. During the workshop, the City will select up to three (3) alternatives to advance and evaluate further.
- 1.3. Following the workshop, Tetra Tech will advance the preliminary investigations and evaluations of the three (3) selected alternatives by the City. Tetra Tech will utilize the existing hydraulic model and flow approximations based on the capacity of the existing 18" sanitary sewer, for the preliminary evaluation of the selected alternatives. Land use data and parcel counts utilizing GIS will be used to validate the flow calculations. Tetra Tech will conduct a desktop analysis utilizing the City's GIS data to evaluate possible pump station siting, force main corridor and route analysis, and develop connection point alternatives.
- 1.4. Tetra Tech will develop high-level opinion of probable construction costs (OPCC) that meets the requirements of an AACE Class 5 Estimate for the three (3) selected alternatives. This OPCC shall be used for comparing alternatives and assisting the City in selecting which alternatives to advance to the next level.
- 1.5. Tetra Tech will conduct a workshop with the City to present the results of the analysis of the selected alternatives and provide recommendations for improvements that should be implemented. After this workshop, the City will select the alternatives for the improvements to be implemented in the next phase of this project.
- 1.6. Tetra Tech will summarize the results of the alternatives development and evaluation process, as well as the selected alternative to be implemented, in a technical memorandum.

**1.7. Deliverables:**

- 1.7.1. Summary of Preliminary Alternatives Development Process and Evaluation Results Technical Memorandum

**2. Task 2 – Infrastructure Assessment and Data Collection**

- 2.1. Concurrent with Task 1, Tetra Tech, through its subcontractor USSI, will conduct smoke testing of approximately 251,513 linear feet (LF) of gravity sanitary sewers within the Bayshore Pump Station tributary area, with an initial focus on the W. Coachman and W. Alline Avenues sanitary sewers. A detailed report of defects found during the smoke test will be submitted to the City. The scope will include the supply and installation of up to 120 missing cleanout plugs, using USSI's LDL™ Clean-Out Plug, at locations detected by the smoke testing. An allowance to perform up to ten (10) dye tests at areas of questionable inflow is included in Task 6 below.
- 2.2. Also concurrent with Task 1, Tetra Tech, through its subconsultant Applied Ecology, Inc., (AEI) will collect flow data at ten (10) locations and rain fall data from rain gauges at three (3) locations within the Bayshore Basin for a period of approximately three (3) months during the 2025 storm season. It is anticipated that flow monitors will be installed at manholes which may require temporary maintenance of traffic and confined space entry. Appropriately trained and experienced staff will be utilized for these tasks. The flow locations will be inspected and verified for suitability including signs of erratic flow patterns and presence of debris. Line cleaning may need to be coordinated with the City or a nearby suitable site may be selected during the installation process. If location changes are made in the field, AEI staff will confirm the new locations meet the project goals. It is anticipated that rain gauges will be installed on City property, ideally in fenced locations, and on top of structures or roofs for protection and clear from obstructions to ensure quality data collection. The following metering locations have been identified:
  - 2.2.1. Bayshore Boulevard (upstream of Coachman Ave sewer connection manhole)
  - 2.2.2. Coachman Avenue and Bayshore Boulevard
  - 2.2.3. Coachman Ave. and MacDill Ave.
  - 2.2.4. Bayshore Ct. and MacDill Ave.
  - 2.2.5. Coachman Pump Station
  - 2.2.6. Euclid Ave (12" Gravity Sewer) at Bayshore Blvd
  - 2.2.7. Julia Steet (12" Gravity Line) at Bayshore Blvd
  - 2.2.8. Bayshore Pump Station (30" Gravity Sewer)
  - 2.2.9. Knights Ave (8" gravity sewer) at Bayshore Blvd
  - 2.2.10. Chapin Ave (8' gravity sewer) at Bayshore Blvd
- 2.3. Deliverables:
  - 2.3.1. Smoke Testing Detailed Report of defects.
  - 2.3.2. Summary of Flow Metering to include QA/QC'd data at 5-minute intervals, installation sheets showing the specifics of the meter installation, records of meter maintenance and check measurements (D, V, sediment...), equipment used and approach for meter maintenance.

**3. Task 3 – Model Updates and Calibration**

- 3.1. Model Updates - Using the City's existing GIS data, Tetra Tech will update the existing hydraulic model of the gravity sewer collection and force main transmission systems using the PCSWMM software. Sewer size/elevation data will be obtained from the GIS and supplemented with any field data that may

be collected by the City. Any areas where data has been calculated or supplemented will be clearly identified in the model with the data source. Once data review and collection has been completed, assets will be delineated for inclusion in the model.

**3.1.1. The following assets will be included in model development:**

- 3.1.1.1. Gravity Sewers:** all City-owned sewer, 8-inches and larger within the area served by the 18-inch Coachman Avenue sewer. The remainder of the existing model network will be maintained as-is.
- 3.1.1.2. Manholes:** All manholes connected to an included gravity sewer
- 3.1.1.3. Pump Stations:** All pump stations within the area directly tributary to the 18-inch Coachman Avenue sewer. The remainder of the existing model network will be maintained as-is.
- 3.1.1.4. Force Mains:** Force mains connected to all included pump stations.

**3.1.2. Pump stations** will be modeled using pump curves as provided by the City. If pump curves are not available, the stations will be modeled with a nominal firm capacity provided by the City. ON/OFF levels will be included for each pump, as provided by the City. Gravity sewer and force main roughness parameters will be based on textbook values based on material (as provided in the GIS). If material is not available, an average roughness value will be assumed. If the City has data on known sediment accumulation, this data will be incorporated into the model.

**3.1.3. The sewer network** will be divided into catchments to represent where sewer from various sources is collected. In the hydraulic model, model catchments will be delineated to represent the area tributary to a given model node. Catchments will be delineated based on sewer connectivity, flow meter locations, and areas of expected future growth (if provided by the City). It is expected that all upstream terminal nodes and nodes where non-modeled sewers connect will have a tributary area delineated. The Coachman Avenue system is part of the Bayshore Pump Station Collection System. This will be used as the boundary condition for model.

**3.2. Model Calibration** - Tetra Tech employs a multiple step process to calibrate dry weather flow (DWF) and wet weather flow (WWF) parameters in the hydraulic model. This process allows us to accurately model each component of the flow stream. Tetra Tech will collect flow and precipitation data under Task 2 above to be used for this effort, including ten (10) flow meters and three (3) rain gauges for a period of approximately three (3) months.

**3.2.1. During the data analysis,** Tetra Tech will apply its custom SSOAP+ data analytics tool to disaggregate the dry and wet weather flows into discrete time series data. The dry weather flow data is used to identify the base wastewater flow (BWWF) and the seasonal groundwater infiltration (GWI, which is not directly related to rainfall). The SSOAP+ software automates the process of disaggregating the flow data and development of RTK parameters for modeling inflow/infiltration(I/I) in the model.

**3.2.2. Dry Weather Flow Calibration** - Tetra Tech will follow a two-step process to calibrate dry weather flow in a manner that distributes flows upstream of the meters as they occur. The first step is to develop loading rates based on water use billing records and assign those to the model input locations. Twelve months of billing data will be averaged to create an annual average loading that represents water usage across the service area. The second step is to prorate those loading rates to reflect the observed dry weather flow data observed at the flow meters.

**3.2.3. Wet Weather Flow Calibration** - Tetra Tech will calibrate the I/I hydrology based on discrete rainfall events previously collected by the City. The calibration will adjust I/I parameters conveyance system in the model within accepted ranges to produce optimal agreement with

measured data, anecdotal system observations and historical complaints. The model will be calibrated to the Chartered Institution of Water and Environmental Management (CIWEM) industry standards. Model calibration will be checked for specific rainfall events and continuous simulations using the following hydrologic and hydraulic parameters and typically acceptable criteria:

- 3.2.3.1. Peak flow rate (+25/-15%)
- 3.2.3.2. Event volume (+20/-10%)
- 3.2.3.3. Nash-Sutcliffe Efficiency Coefficient (greater than 0.5)
- 3.2.3.4. Hydrograph magnitude, shape and timing (closely resemble measured hydrograph)
- 3.2.3.5. Hydraulic grade (+1.50'/-0.33')
- 3.2.4. The model will be run and adjusted such that two-thirds of the events meet these criteria with respect to the observed data. A sensitivity analysis will be used to selectively adjust model parameters to optimally reproduce the system response. Results of calibration efforts will be shown on a standard regression plot to display the agreement between measured and model-projected flow rates and volumes.
- 3.2.5. The calibration results will be reviewed with the City prior to moving forward into secondary alternative evaluation. Any comments on the modeling will be addressed and final calibration results provided to the City.
- 3.3. Select Design Condition – Utilizing the calibrated model, Tetra Tech will perform a sensitivity analysis of various theoretical design storm events and data from actual hurricane and/or tropical storm conditions. The purpose of this sensitivity analysis is to quantitatively examine the relationship between recurrence interval and basin flow magnitudes. Results will be summarized and provided to the City with a recommended design condition for alternatives evaluation. The results of the sensitivity analysis and Tetra Tech recommendations will be presented during a third workshop. During this workshop, the City and Tetra Tech will validate the design condition and the alternatives to evaluate during the next phase.
- 3.4. Deliverables
  - 3.4.1. Summary of Model Calibration Documentation
  - 3.4.2. Sensitivity Analysis and Design Condition Selection Summary

#### **4. Task 4 – Evaluate Alternatives and Recommendations**

- 4.1. Alternatives Evaluation – Once the City has selected a design condition and validated the three (3) alternatives selected in Task 1, Tetra Tech will utilize the calibrated model to further evaluate the alternatives. This effort will include refining the pump station sizing, identify any gravity conveyance improvements, and analyze infiltration and inflow (I&I) reduction measures.
- 4.2. Tetra Tech will validate the OPCC that meets the requirements of an AACE Class 3 Estimate for the three (3) selected alternatives.
- 4.3. Economic Comparison – Tetra Tech will compare the construction costs, as well as operations and maintenance costs of the selected alternatives, in order to assist the City in making a final selection of the alternative to be implemented.
- 4.4. Report – The results of the development and evaluation process will be summarized in a draft technical memorandum submitted to the City for review. A comment review meeting will be scheduled to discuss the City comments. Once the comments are resolved, Tetra Tech will prepare and submit the final report to the City for approval.

**4.5. Deliverables:**

- 4.5.1. Summary of Alternatives Development and Selection Process Results
- 4.5.2. Class 3 OPCC of Selected Alternatives
- 4.5.3. Economic Comparison of Selected Alternatives

**5. Task 5 - Meetings and Workshops****5.1. We anticipate the following meetings and workshops for this project:**

- 5.1.1. Kickoff meeting. To be held within 10 days of receiving the notice to proceed. The purpose of this meeting is to introduce the project team, establish lines of communication, review project objectives, discuss the project scope, review project milestones and establish the project deliverables.
- 5.1.2. Monthly Progress Meetings. These will be Teams calls, on an as-needed basis, to review status and discuss questions that arise through the course of the work. These meetings will be held as needed.
- 5.1.3. Model Calibration Review Meeting. Tetra Tech will present the results of the model calibration and share initial findings from the initial model runs.
- 5.1.4. Technical Memorandum Comment Review Meeting. The meeting will be to discuss the City's review comments prior to finalizing the memorandum.

**6. Task 6 - Allowances**

- 6.1. Additional Alternative Analysis - This allowance is for evaluation of up to three (3) additional alternatives, as directed by the City, that may emerge during this initial part of the project. The City Project Manager will provide written authorization prior to using any portion of this allowance.
- 6.2. Sanitary Sewer Dye Testing – This allowance is for dye testing up to ten (10) locations that are deemed as questionable sources of inflow. It is anticipated that the majority of the sources of inflow in the Bayshore Basin will be identified by the smoke testing included in Task 2.1 above. However, there might be instances that would require additional evaluation utilizing dye testing.

**Assumptions/Notes**

- 1. City will provide twelve (12) months of geocoded water billing records of the Bayshore Pump Station Basin.
- 2. City will provide available flow, run time, and rainfall data from the existing pump stations in the Bayshore Pump Station Basin.
- 3. Site access and approvals for flow metering and rain gauge installation will be coordinated with the City.
- 4. The City will assist with any required cleaning at the selected flow metering locations prior to equipment installation.
- 5. While all efforts will be made to minimize equipment downtime and data gaps, there are no guarantees that data gaps will not be present in the final data deliverable due to unforeseen circumstances.
- 6. This scope includes 90 days of flow and rainfall monitoring. This monitoring period may be extended by a change order prior to equipment removal.

## CITY OF TAMPA INSURANCE REQUIREMENTS

Prior to commencing any work or services or taking occupancy under that certain written agreement or award (for purposes of this document, Agreement) between the City of Tampa, Florida (City) and Firm/Awardee/Contractor/Consultant/Lessee/non-City party, etc. (for purposes of this document, Firm) to which this document is attached and incorporated as an Exhibit or otherwise, and continuing during the term of said Agreement (or longer if the Agreement and/or this document so requires), Firm shall provide, pay for, and maintain insurance against claims for injuries to persons (including death) or damages to property which may arise from or in connection with the performance of the Agreement (including without limitation occupancy and/or use of certain property/premises) by Firm, its agents, representatives, employees, suppliers, subtenants, or subcontractors (which term includes sub-consultants, as applicable) of any tier subject to the terms and conditions of this document. Firm's maintenance of insurance coverage as required herein is a material element of the Agreement and the failure to maintain or renew coverage or provide evidence of same (defined to include without limitation Firm's affirmative duty to provide from time to time upon City's request certificates of insurance, complete and certified copies of Firm's insurance policies, forms, and endorsements, information on the amount of claims payments or reserves chargeable to the aggregate amount of coverage(s) whether during the term of the Agreement or after as may be requested by the City in response to an issue or potential claim arising out of or related to the Agreement to which Firm's insurance obligations hereunder may apply or possibly help mitigate) may be treated as a material breach of the Agreement. Should at any time Firm not maintain the insurance coverages required, City at its sole option (but without any obligation or waiver of its rights) may (i) terminate the Agreement or (ii) purchase such coverages as City deems necessary to protect itself (charging Firm for same) and at City's option suspending Firm's performance until such coverage is in place. If Firm does not reimburse City for such costs within 10 days after demand, in addition to any other rights, City shall also have the right to offset such costs from amounts due Firm under any agreement with the City. All provisions intended to survive or to be performed subsequent to the expiration or termination of the Agreement shall survive, including without limitation Firm's obligation to maintain or renew coverage, provide evidence of coverage and certified copies of policies, etc. upon City's request and/or in response to a potential claim, litigation, etc.

The City reserves the right from time to time to modify or waive any or all of these insurance requirements (or to reject policies) based on the specific nature of goods/services to be provided, nature of the risk, prior experience, insurer, coverage, financial condition, failure to operate legally, or other special circumstances. ~~If Firm maintains broader coverage and/or higher limits than the minimums shown herein, the City requires and shall be entitled to such broader coverage and/or higher limits maintained by Firm.~~ Any available insurance proceeds in excess of the specified minimum limits of insurance and coverage shall be available to the City. No representation is made that the minimum insurance requirements are sufficient to cover Firm's interests, liabilities, or obligations. Required insurance shall not limit Firm's liability.

Firm acknowledges and agrees Firm and not the City is the party in the best position to determine applicability (e.g. "IF APPLICABLE"), confirm, and/or verify its insurance coverage. Acceptance by the City, or by any of its employees, representatives, agents, etc. of certificates or other documentation of insurance or policies pursuant to the terms of this document and the Agreement evidencing insurance coverages and limits does not constitute approval or agreement that the insurance requirements have been met or that coverages or policies are in compliance. Furthermore, receipt, acceptance, and/or approval of certificates or other documentation of insurance or policies or copies of policies by the City, or by any of its employees, representatives, agents, etc., which indicate less coverage than required does not constitute a waiver of Firm's obligation to fulfill these insurance requirements.
